1.0 INTRODUCTION

The Douglas Aircraft Company (DAC) C-6 Facility is located at 19503 South Normandie Avenue, Torrance, California (Figure 1). Quarterly groundwater sampling is being conducted in response to the California Regional Water Quality Control Board - Los Angeles Region correspondence to DAC, dated 7 April 1992. This report summarizes laboratory analytical data generated through the chemical analysis of groundwater samples collected during the period of 18 and 19 November 1993, Fourth Quarter 1993.

2.0 QUARTERLY MONITORING PROGRAM

Fourth Quarter 1993 groundwater sampling was performed in accordance with standard sampling procedures. Static water level depths were measured on 18 November 1993 prior to initiating purging of groundwater from any observation wells. Static water depths on monitoring wells (MW-9, MW-18 and MW-19) located in the southern portion of DAC property installed for the Montrose Chemical Corporation Remedial Investigation were not measured for this quarter.

Groundwater samples were collected from the following fifteen wells (Figure 2) and chemically analyzed for volatile organic compounds (VOCs) by EPA Method 8240/8260 for the Fourth Quarter 1993.

WCC-1S, WCC-2S, WCC-3S, WCC-4S, WCC-5S, WCC-6S, WCC-7S, WCC-8S, WCC-9S, WCC-10S, WCC-11S, WCC-12S, WCC-1D, WCC-3D, and DAC-P1.

Table 1 summarizes observation well construction details. Tables 2 and 3 summarize the results of chemical analysis of groundwater samples and duplicates for major and minor constituents at the C-6 facility, respectively. Chemicals detected in samples from each observation well are shown on Figure 3. Table 4 summarizes available measured groundwater elevations to date. Estimated groundwater elevation contours for the Fourth Quarter are presented on Figure 4. Copies of laboratory data sheets, laboratory/field Quality Control data sheets, groundwater purge and sample forms, and Chain-of-Custody records are included in Appendices A, B, C, and D respectively.

2.1 Groundwater Sampling Procedures

Prior to collecting groundwater samples from each well, groundwater was purged using an electrical submersible pump that was temporarily installed in the observation well. Observation well WCC-1S was purged with a bailer since the 2-inch casing size would not accommodate a pump. After lowering the pump to the approximate mid-point of the saturated well screen, approximately three to five wetted casing volumes of groundwater were purged from the well until the following groundwater monitoring parameters had stabilized to within 10% of preceding values: pH, electrical conductivity, temperature and clarity. Purged groundwater was stored onsite in DOT approved 55 gallon barrels pending the results of laboratory analysis of samples.

Following groundwater purging, the submersible pump was removed from the well and a representative groundwater sample was collected using a steam-cleaned stainless steel point-source bailer equipped with top and bottom ball-check valves. The bailer was lowered to the approximate mid-point of the saturated well screen interval and retrieved to ground surface. The contents of the bailer were drained into three labelled 40-ml capacity vials, preserved with HCL.

2.2 Field QA/QC Procedures

Two duplicate groundwater samples were collected for the sampling rounds on 18 and 19 November 1993 for quality control purposes. The duplicates were collected in three HCL-preserved vials each and identified by inserting the collection date after "DW-" (DW-111893 and DW-111993). No further sample identification was provided to the laboratory. Samples DW-111893 and DW-111993 were taken from observation wells WCC-3D and WCC-11S, respectively.

Following decontamination of the bailer by steam-cleaning, and prior to collection of groundwater samples from the successive well, equipment rinsate blanks were prepared for laboratory analysis. The equipment rinsate blanks were prepared by pouring Reagent Grade II water, prepared by the analytical laboratory, through the bailer and discharge spigot and collecting the rinsate in one 40-ml vial preserved with HCL. The blanks were identified following a similar protocol to that used for duplicate water samples and are identified as "FB-111893" and "FB-111993". The wells sampled before and after rinsate blank preparation were recorded. FB-111893 was collected after sampling well WCC-9S and prior to sampling well WCC-1D. FB-111993 was collected after sampling WCC-3S and prior to sampling well WCC-1S.

All groundwater duplicate and field blank samples were transported in ice-cooled chests to Terra Tech Labs, Inc., Irvine, California using U.S. EPA-recommended Chain-of-Custody procedures.

3.0 EVALUATION OF ANALYTICAL RESULTS

3.1 Groundwater Gradient

Groundwater levels were measured prior to sampling on 18 November 1993 (Table 4 and Appendix B). The groundwater elevations over the C-6 facility range from approximately 17.0 feet below mean sea level (MSL) to nearly 19 feet below MSL. An estimated potentiometric surface map for the shallow zone as measured on this day is presented as Figure 4. Water level measurements show a rise of approximately 0.2 feet over the DAC C-6 facility since the August quarterly monitoring. The groundwater gradient in the shallow zone was generally south-southeast with a southerly trough-like depression in the vicinity of observation wells WCC-7S and WCC-12S.

Insufficient data (two wells) are available to define the groundwater gradient in the deeper zone. Groundwater elevation in the two wells (WCC-1D and WCC-3D) is approximately 18.3 feet below MSL.

3.2 Analytical Data

The results of chemical analysis of groundwater and duplicate samples are summarized in Tables 2 and 3. Table 2 lists major constituents and Table 3 lists additional minor constituents of samples tested. The duplicate groundwater samples are indicated by an asterisk and are presented with the "original" groundwater samples. These tables include cumulative analytical data for all monitoring wells and detection limits (where available) for the listed chemicals.

The following observations are noted:

- Data for groundwater samples collected from well DAC-P1, located at the upgradient property boundary, indicate a TCE concentration of 24,000 micrograms per liter ($\mu\text{g}/\text{L}$) coming onto DAC's property. This test result is consistent with prior sampling events. DAC-P1 is screened in the shallow zone.
- Background concentrations of TCE and 1,1-DCE in the shallow zone upgradient or cross gradient wells WCC-10S, WCC-2S, and WCC-11S have shown a slight decrease but remain in the range of 100 $\mu\text{g}/\text{L}$ and tens of $\mu\text{g}/\text{L}$ for TCE and 1,1-DCE, respectively.
- Groundwater elevation data (Figure 4) and chemical concentration data (Figure 3) indicate that chemical transport in the shallow zone is in a generally southerly direction in the vicinity of buildings 36 and 41. Chemical concentration data from the eastern boundary observation wells (WCC-5S, and WCC-9S) are within the same range or lower than upgradient or cross gradient "background level" wells (WCC-10S, WCC-2S and WCC-11S). Therefore, the data do not suggest chemical migration offsite from an onsite source.
- The First Quarter 1993 report noted anomalous data for several chemicals present in wells WCC-3D and WCC-3S. The June 1993 (Second Quarter) and August 1993 (Third Quarter) chemical data showed that measured concentrations were consistent with their historical ranges suggesting questionable First Quarter results. The November 1993 (Fourth Quarter) data show sporadic increases or decreases in concentration of several VOCs. Continued quarterly data will allow for an assessment of a trend, if any.

DRAFT

- Measured concentrations of MIBK and Toluene increased from 3,900 µg/L to 13,000 µg/L and 10,000 µg/L to 21,000 µg/L, respectively in well WCC-6S from the first to second quarter samplings while other chemical concentrations were consistent with their historical concentration ranges. Data from the Third Quarter 1993 sampling event indicated measured concentrations of MIBK and Toluene consistent with the Second Quarter measured concentrations. However, Fourth Quarter data indicate a return to historical concentration levels. Continued quarterly data will allow for an assessment of a trend, if any.
- Analytical data from the equipment rinsate blanks, sample duplicates, and laboratory spike and duplicates are indicative of reliable data.

Notes:

1. Reference point is north side, top of well casing
2. Reference point elevation measured by Hargis + Associates, Inc.
3. Data taken from Woodward-Clyde Consultants Phase II Report, May 1988.
4. Data taken from Woodward-Clyde Consultants Phase III Report, March 1990.
5. N/A - Not Available - No access to offsite wells.
6. Installed by Hargis + Associates, Inc. for Montrose Chemical Corporation

LABORATORY REPORT

Client: Kennedy/Jenks Consultants Report Date: 12/3/93
Client Address: 17310 Red Hill Avenue, Suite 220 Lab P.N.: 5995
Irvine, CA 92714 Client P.N.: 924010.00

Contact: Sarah Bartling

Project Name: Douglas Aircraft Company Date Sampled: 11/18/93-11/19/93
Project Address: N/A Date Received: 11/19/93
Date Analyzed: 11/22/93-12/1/93
Physical State: Liquid

Quality Assurance/Quality Control Summary

Parameter (Method)	QC Type	Percent	Duplicate Percent	Acceptable Range	Relative Percent	Acceptable Range
		Recovery	Recovery		Difference	
1,1, Dichloroethene (EPA 8240/8260)	L	63	70	50-127	11	0-22
Trichloroethene (EPA 8240/8260)	L	85	96	64-137	12	0-15
Benzene (EPA 8240/8260)	L	85	95	80-121	11	0-15
Toluene (EPA 8240/8260)	L	87	97	82-118	11	0-12
Chlorobenzene (EPA 8240/8260)	L	96	106	85-119	9	0-12
1,1, Dichloroethene (EPA 8240/8260)	M	87	90	50-127	3	0-22
Trichloroethene (EPA 8240/8260)	M	97	103	64-137	6	0-15
Benzene (EPA 8240/8260)	M	89	96	80-121	7	0-15
Toluene (EPA 8240/8260)	M	91	98	82-118	7	0-12
Chlorobenzene (EPA 8240/8260)	M	92	100	85-119	9	0-12

M = Matrix Spike / Matrix Spike Duplicate

L = Laboratory Control Sample Spike / Spike Duplicate

Reviewed

Approved

The samples were received by TERRA TECH LABS, Inc. in a chilled state, intact and accompanied by the Chain-of-Custody Record.

Acceptance of samples by Terra Tech Labs, Inc. is not an indication of condition upon receipt.

Laboratory Results apply only to the sample matrix analyzed and may not apply to an apparently identical or similar sample.

The Laboratory Report is the property of the client to whom it is addressed.

The Laboratory Results are only a portion of the Laboratory Report.

COMMENTS/CONDITIONS:
 (Container type, container number, etc.)

Carrier/Way Bill: delivered

Lab Destination: Terra Tech Lab

Send unused sample to:

EEA 621
 EPA 024020

- 1) Write only one sample number in each space.
- 2) Specify type of sample(s): Water(W), Solid(S), or indicate type.
- 3) Mark each sample which should be composited in laboratory as follows: Place an "X" in box for each sample that should be composited into one sample; use sequential letter for additional groups.
- 4) Preservation of sample.
- 5) Write each analyses requested across top. Place an "X" in appropriate column to indicate type of analysis needed for each sample.
- 6) Write address where unused sample should be sent or "X" lab disposal box if lab should bill client for sample disposal.
